1 Question No. 2.60

Let ABC be a right triangle in which $a = 8, c = 6$ and $\angle B = 90^{\circ}$. BD is the perpendicular from **B** on AC (altitude). The circle through $\mathbf{B}, \mathbf{C}, \mathbf{D}$ (circumcircle of $\triangle BCD$) is drawn. Construct the tangents from **A** to this circle.

2 Solution

Data from the given question

	Symbols	Circle
Centre	**E**	$\begin{pmatrix}4\\0\end{pmatrix}$
Radius	r	4

1) Let us generalise the given data:

$$\mathbf{B} = \begin{pmatrix}0\\0\end{pmatrix}, \mathbf{A} = \begin{pmatrix}0\\c\end{pmatrix}, \mathbf{C} = \begin{pmatrix}a\\0\end{pmatrix} \tag{2.0.1}$$

$$\beta = \angle DBC \tag{2.0.2}$$

$$\alpha = \angle PEC \tag{2.0.3}$$

$$\mathbf{AB} = c \tag{2.0.4}$$

$$\mathbf{BC} = a \tag{2.0.5}$$

$$\mathbf{AC} = b \tag{2.0.6}$$

$$\mathbf{BD} = t \tag{2.0.7}$$

2) Let **E** be the the midpoint of **BC**, therefore

$$\mathbf{E} = \frac{\mathbf{B}+\mathbf{C}}{2} = \begin{pmatrix}\frac{a}{2}\\0\end{pmatrix} \tag{2.0.8}$$

3) Now taking **E** as center we will draw a circle of radius 4 which will circumscribe $\triangle BCD$.

4) Tangents to this circle from point **A** will be **AB** and **AP** as shown in the figure.

5) Using sine formula we get,

$$\angle BAE = 33.69^{\circ} \tag{2.0.9}$$

$$\angle BAC = 53.18^{\circ} \tag{2.0.10}$$

$$\mathbf{BD} = 4.8 \tag{2.0.11}$$

$$\angle DBC = 53.13^{\circ} \tag{2.0.12}$$

6) Now,

$$\mathbf{D} = \mathbf{B} + \begin{pmatrix}r\cos\beta\\r\sin\beta\end{pmatrix} \tag{2.0.13}$$

$$\mathbf{D} = \begin{pmatrix}0\\0\end{pmatrix} + \begin{pmatrix}0.60\\0.799\end{pmatrix} \tag{2.0.14}$$

$$\mathbf{D} = \begin{pmatrix}2.88\\3.84\end{pmatrix} \tag{2.0.15}$$

7) Here,

$$\angle PEC = 2\angle BAE \tag{2.0.16}$$

$$\angle PEC = 2 \times 33.69^{\circ} \tag{2.0.17}$$

$$\angle PEC = 67.38^{\circ} \tag{2.0.18}$$

8) Now coordinates of **P** from center of circle **E** will be,

$$\mathbf{P} = \mathbf{E} + \begin{pmatrix}r\cos\alpha\\r\sin\alpha\end{pmatrix} \tag{2.0.19}$$

$$\mathbf{P} = \begin{pmatrix} 4 \\ 0 \end{pmatrix} + \begin{pmatrix} 1.53 \\ 3.69 \end{pmatrix} \tag{2.0.20}$$

$$\mathbf{P} = \begin{pmatrix} 5.53 \\ 3.69 \end{pmatrix} \tag{2.0.21}$$

9) Therefore, we have coordinates as,
$\mathbf{A}=\begin{pmatrix} 0 \\ 6 \end{pmatrix}$,$\mathbf{B}=\begin{pmatrix} 0 \\ 0 \end{pmatrix}$,$\mathbf{C}=\begin{pmatrix} 8 \\ 0 \end{pmatrix}$, $\mathbf{E}=\begin{pmatrix} 4 \\ 0 \end{pmatrix}$, $\mathbf{P} = \begin{pmatrix} 5.53 \\ 3.69 \end{pmatrix}$,
$\mathbf{D}=\begin{pmatrix} 2.88 \\ 3.84 \end{pmatrix}$

10) On constructing the given figure we get:

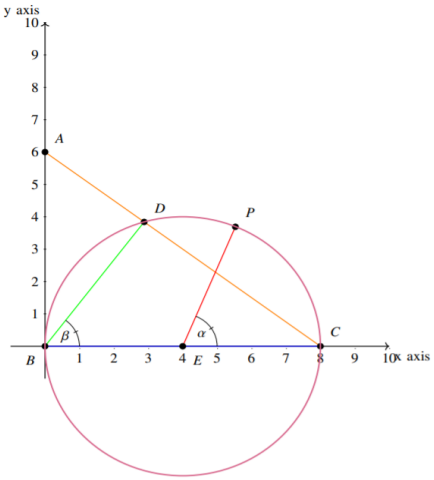

Fig. 2.1: Tangents to a Circle
